

## Nokia N9 QuickTweak tool v6.8 (for PR 1.2 only)

Hello

This app have a different set of tweaks like [Speed Up Transitions](#) based on versions from PR1.1 that created by [F2thaK](#) (Thanks)...

I also used some stuff from [Almehdin's script](#) and I got a big help with some my commands from [hxka](#) from [Russian forum](#) (Thanks to both of you). **This script work properly only on PR 1.2 and base/blanco theme !!!**

This package including option to **Backup** files from your phone before you start to tweak.

I tried this app a few times and it's work perfectly and quickly, but still **I'm not responsible for the damage will cause to your phone** ☺. ([video of F2thaK v2.6](#))

**If you use [Home screen settings](#) app, DON'T use N9 QTwaek – this can cause REBOOT LOOP !**

**If you use some tweaks that you need write something, PLEASE write letters exactly like in default or example strings, big or small letters. You will see this in the question like (def. LIGHT), this mean write big letters, or (ex. ffffff) this mean write small letters. If you will do mistake, sometimes this can cause REBOOT LOOP.**

**If you broke your device and you need to reflash, you can use [my instruction](#) or read [this post](#).**

***If you like my work, you can DONATE here. Thanks!***

Before installation, make sure you have "**allow other sources**" set in settings and **developer-mode activated**.

### Installation:

- Download and transfer the **.deb** file (thanks to [Ammyt](#) & [hxka](#)) to your phone.
- Install the **.deb** file by the usual way (double tap on file).
- Go to application Homescreen. You will see a **new icon** (Thanks to [3llipsis](#)) at the end of the list and you can see the PDF instruction inside the: **/home/user/MyDocs/Documents**
- Tap on it and it will ask you for password of **devel-su** (default: **rootme**)
- Choose letter you want and press Enter (you can write big or small character).

### NOTE:

- **Run "Create Backup !!!" (tweak K) on your first use of this app, you need to do this only once ! When you will update to new version, you DON'T need to do this again.. You also don't need to run "Restore" before updating ! To update to new version, just install new .deb file (double click). If you forget to create backup, you can download [my clean backup](#). Just extract from ZIP and put to your phone, to: **/home/user/MyDocs**.**
- After creating Backup, start to play with tweaks A or B, because of some tweaks that uses same files and if you restore A or B, this also can restore some other tweaks and you should be reapply them...
- You can choose more of one tweaks separated by one space and press ENTER. (ex: A B D E ... Enter)
- Some tweaks need **refresh** or **reboot** and if you want to use more tweaks in the same session, just put this letters at the end. Or use what you want, but don't refresh them until the end of the session.

### Tweaks menu:

**A. Speed Up Transitions MODs** – You have a three different options (this need **refresh**):

1. **Full Speed Up Transition MOD** - include landscape mod for Home & Lockscreen.
2. **Speed Up Transitions with Only Homescreen Landscape**
3. **Speed Up Transitions with Only Lockscreen Landscape**
4. **Only Speed Up Transitions** - without landscape mod for Home & Lockscreen.
5. **Restore to default** – This will restore your backup files.

**B. Landscape MODs** - You have a four different options (this need **refresh**):

1. **Full Landscape MOD** (Home & Lockscreen)
2. **Only Homescreen Landscape MOD**
3. **Only Lockscreen Landscape MOD**
4. **Restore to default**

**D. Virtual Keyboard MODs** – This tweak will add few **alpha-numeric** vkb's (Thanks to [ildar\\_sh](#)). I edited this a little and created some other vkb's - **English, Hebrew, French, Turkish, Italian, Slovak, Russian & Spanish**. You can choose what install/uninstall. In a landscape mode, the vkb's will stay a normal ([see pic](#)).

**Enlarge Landscape Virtual Keyboard** – Enlarge a little your landscape VKB (Thanks to [leo1994](#)). I used version 1.1 and edited it with speed up duration from Faster Transition and stretched spacebar. You also have option for activating stretched spacebar for regular english (gb & us) vkb's without enlarging. **Reboot needed!** You can choose to restart immediately or not.

**Enable extra settings for Swype** – This will activate extra setting for swipe vkb (thanks to Almedhin's [script](#)).

- E. Games MODs** – if you have problem with saving game “Samurai II”, “Gears”, “Roboto” and “Konas Crate” this option help you to fix this. This also have option to Disable NFC in Angry Birds Magic. Added option “[Mighty Eagle for Angry Birds Classic](#)” (thanks to [hoody](#)).
- F. Lock screen & Low power screen MODs** – This will add operator logo to your lockscreen (Thanks to [superjunior](#)). You don’t need [LPMCustomizer](#) anymore... This also will change date size to a little bigger and the regular clock font to bold. You have options for changing color of the date & clock on the lock screen and clock on the low power screen. You also have option for custom Clock & Date on Lock screen. Also added option for green icon for the full charged battery. And also you can apply some colored icons for low power screen and statusbar ([see pic](#)). This have **auto-refresh**.

#### Explanation for Oplogo:

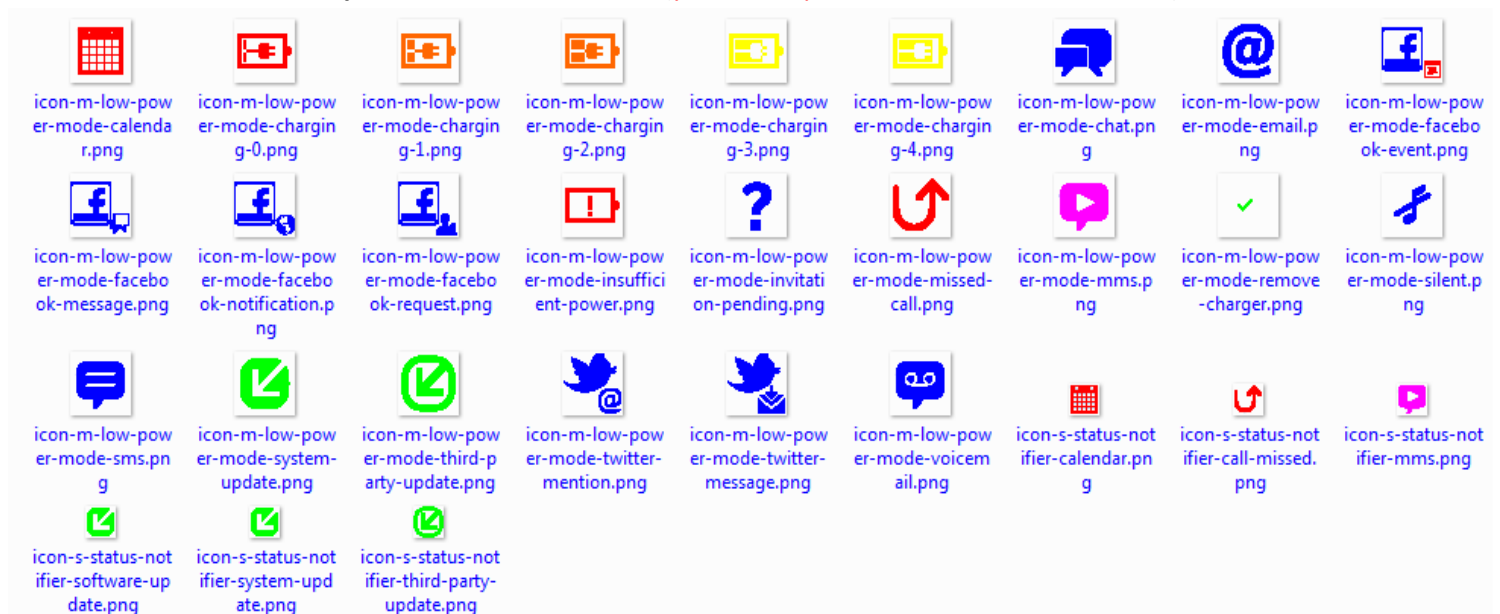

1. Create picture named “**oplogo**” with an **120x120 px** dimension and with **.png** extension (**oplogo.png**).
2. Put this images from your PC to: **/home/user/MyDocs/Pictures**
3. Open **N9 QTweak** app (password of **devel-su**, default: **rootme**), choose **f** [hit Enter], then choose **1** [hit Enter].
4. Your setting will take effect after refresh.

#### NOTE:

\* If you want **bigger** one

1. Create picture with the same name (**oplogo.png**).
2. Put this images from your PC to: **/home/user/MyDocs/Pictures**
3. Open **N9 QTweak** app (password of **devel-su**, default: **rootme**), choose **f** [hit Enter], then choose **2** [hit Enter].
4. This will ask you to insert first number and second number of your size. This number it’s a mm. **Example:** if you have picture 140x160px, the first number is 14 and the second is 16.
5. Your setting will take effect after refresh.

Added new option for transferring your custom colored icons to Tweak **F-5**. For now, Tweak **F-5** have this list of colored icons for **lowpower screen & statusbar** (your backup also have **ONLY** this icons set):

You can change them if you want by creating new icons and putting them to the folder named “**.newicons**” on your phone: **/home/user/MyDocs/.newicons**

After this, go to the tweak **F**, choose option **6**, then press enter. Your new icons will override this icons list. Now go to tweak **F** again, choose option **5** to apply them, then press enter. Reboot needed at the end.

By this way you can add and apply more/other icons like “qneptunea”, but before doing this, you will need to backup your other icons manually...

**Activate Fullscreen image for Lockscreen** – it's activate a **big-fullscreen** image for Lockscreen Landscape MOD, but before you apply this, you need to do something... [Read this](#) (thanks to [jflatt](#)).

**Explanation:**

1. Create **1** or **5** pictures named **"mywall"** with an **854x854 px** dimension and with **.png** extension (**mywall1.png**, **mywall2.png**, **mywall3.png**, **mywall4.png**, **mywall5.png**). Just remember what the picture and what his number...
2. Put this images from your PC to: **/home/user/MyDocs/.wallpapers/**
3. Go to **Setting -> Wallpaper ->** choose your wallpaper and press **Done**
4. Open **N9 QTweak** app (password of **devel-su**, default: **rootme**), choose **c** [hit Enter].  
You will see option to apply one from 5 pictures. Choose the number of pic that you applied from setting and [hit Enter]. **No need to reboot !!!** And now you will get fullscreen image on your Landscape Lockscreen.  
Added option for **"Give a name to your pictures"** – it will be easy to remember which picture you want to apply.

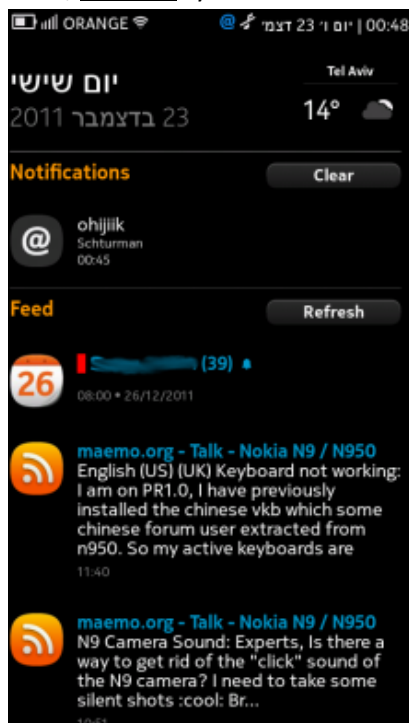

Instead this one:

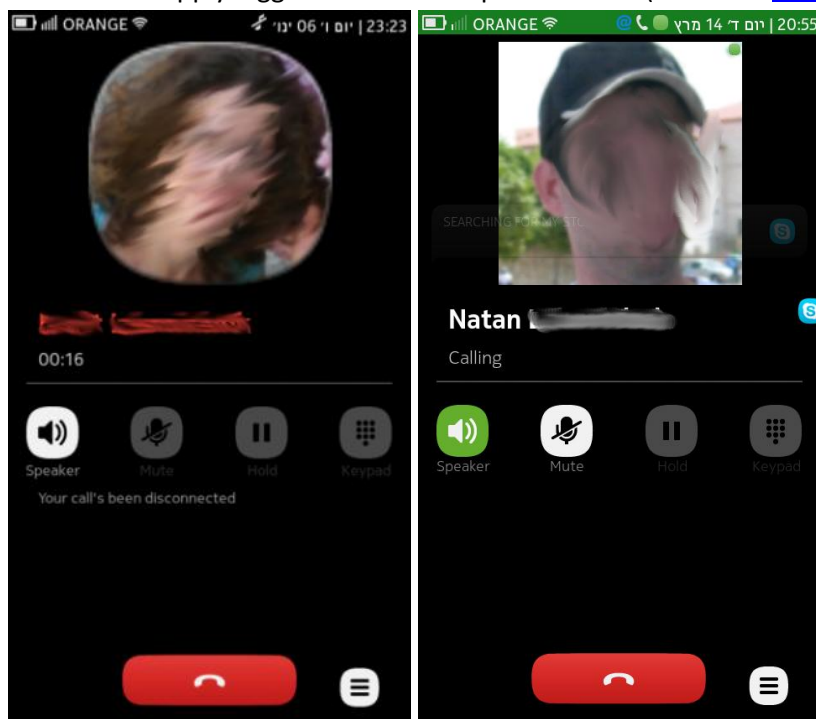

- G. Change GPS (Nokia/Google)** - This will give you ability to change the GPS provider and also you have option for changing SuplForced from "false" to "true" or vice versa. (Thanks to [Almehdin](#) and [his script](#)).
- H. Enable ROOT-SSH Access & Root FileBox** – activate SSH access for **ROOT** & **USER** users. This have **auto-restart SSH** (Thanks to [F2thaK](#) & [Almehdin's script](#)). You also have option to applying (or removing) ROOT access to FileBox app (thanks to [CODERUS](#) & [Fenol](#)). And also you can change **ROOT** & **USER** passwords.
- I. Add additional IM's & Change IM's ports** - This will install **3** additional packages: im-providers-additional telepathy-haze libpurple0. And you can use additional IM's - ICQ/MSN/Yahoo/AOL/Jabber/VK... This need **reboot** for both options: **Add/Remove** (Thanks to [Niwakame](#) and [his packages](#)).  
**Change/Restore IM connection ports** – You can change or restore to default IM connection ports. You can choose a few IM's separated by one space and press ENTER. (ex: 2 4 6 ... Enter).
- J. Remove/Restore not necessary icons** - You can Remove or Restore the **not** necessary icons from your homescreen. It's **not** uninstall, it's only remove icons like facebook, twiter, User guide...You can choose a few numbers separated by one space and press ENTER. (ex: 2 4 6 ... Enter)
- L. Change Outgoing & Incoming Calls icons** – This will change your Outgoing & Incoming Calls history icons (Thanks to [superjunior](#)). **Reboot needed!** You can choice to reboot immediately or not.
- M. Feed & Notification header/title colors** - This will change your Feed & Notification header and title colors to **Orange** and **Blue** (Thanks to [oScho](#)) or you can choose **custom** colors. See here for [colors codes](#). You need insert ONLY the code, **without** symbol **"#"**... This need **refresh**, you can choose to refresh or not.

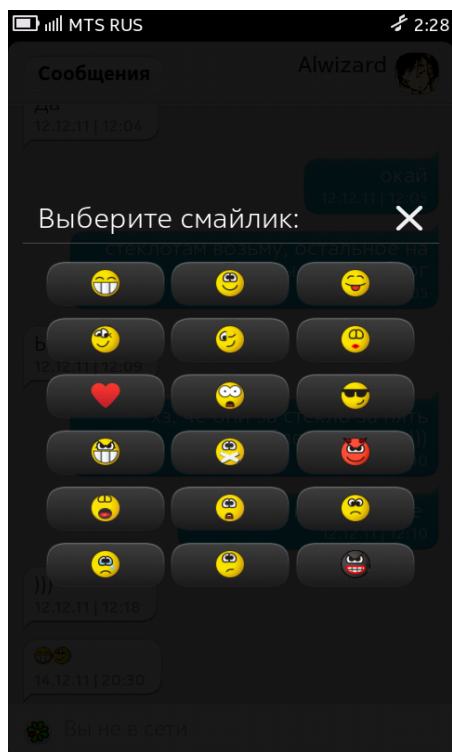

- N. Restore your favorite Ringtones** – put your favorite ringtones into: **/home/user/MyDocs/.myringtones**  
After applying this tweak your favorite ringtones will be copied to: **/usr/share/sounds/ring-tones** Now you easily can find this ringtones in: **Setting -> Sounds and Vibration -> Ringtone**
- P. Add/Remove your folder to/from Tracker** – You can add or remove your folders from **MyDocs** directory to/from **Tracker IgnoredDirectory**. You can choose from one to three folders...

- Q. Enlarge Caller ID Avatar** – You can enlarge or restore to default Caller ID Avatar (thanks to [r0mis](#) & [alxs\\_as-is](#)). You also can apply Bigger Avatar with square corners (thanks to [dvarlamoff](#)). Reboot needed..

- R. Change standard emoticons** - new set of emoticons.

- S. Boost the playback volume** - This will give you ability to boost your playback volume. **Varning!** This could potentially hurt the hardware. Use with caution. This tweak added from Almehdin's [script](#) and he can change **PreDrive** setting in "alsamixer".. Use this on your own risk !!!
- T. Install/Uninstall MT-Toggles (Inception)** – **This tweak ONLY for Pro/Advanced user !!! This Tweak in the testing stage and ONLY for users that have INCEPTION or Open mode installed.**

This tweak can install/uninstall Unrestricted system-ui, mt-toggle app and 4 toggles. If something wrong, **it can KILL your system**. Please try and report in my thread on TMO (thanks to [MohammadAG](#) and BIG thanks to CODeRUS for help with script).

**U. ZOOM in video recording & silent sounds** – this will add/remove zoom option in video recording (Thanks to [kuzmichov](#)). Also, you can add/restore silent sounds to Photo & Video camera (Thanks to [Ancelad](#)), **Reboot needed**. You can choose both of these tweaks separated by one space and press ENTER. (ex: 1 2... Enter)

**W. Change/Restore desktop background** - Change/Restore your desktop backgrounds (Thanks to [kuzmichov](#) and [cckwes](#))...

**Explanation (2 images):**

If you activated landscape mode, and you want to show the two images, one for portrait (on all 3 screens), and one for landscape (on all 3 screens), you can activate the option 1, make 2 pictures (one for landscape and one for the portrait.)

1. Create 2 pictures named:

- 1) "Pdeskb1" with an 480x854 px dimension and with .png extension (**Pdeskb1.png**) for portrait.
- 2) "Ldeskb1" with an 854x480 px dimension and with .png extension (**Ldeskb1.png**) for landscape.

2. Put these images from your PC to: **/home/user/MyDocs/Pictures**

3. Open **N9 QTweak** app (password of **devel-su**, default: **rootme**), choose **w** [hit Enter], then choose **1** [hit Enter].

4. Your setting will take effect after **reboot**. You can choose to restart immediately or not.

- If you use only portrait mode, it is enough to make one picture (**Pdeskb1.png**) and on all three screens, you will have exact same picture...

**Explanation (6 images):**

If you activated landscape mode, and you want to display different pictures for each screen, you can activate the option 2, by preparing six different images, so you will have 6 different screens (3 landscape and 3 portrait).

1. Create 6 pictures named:

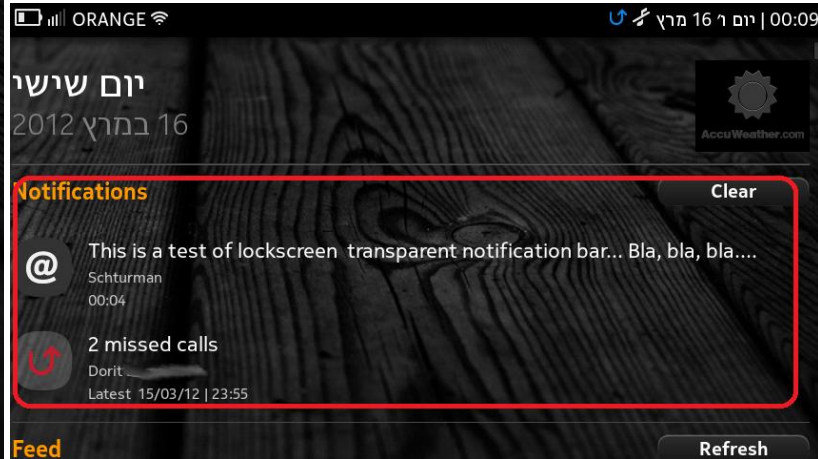

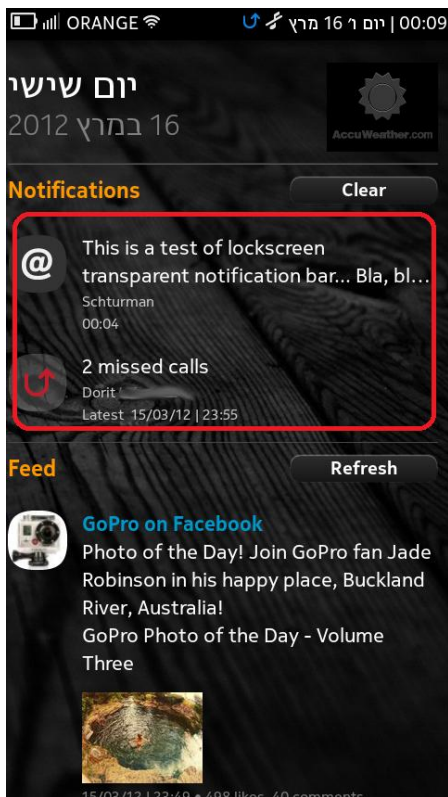

- 1) "Pdeskb1" with an 480x854 px dimension and with .png extension (**Pdeskb1.png**) for portrait.
- 2) "Ldeskb1" with an 854x480 px dimension and with .png extension (**Ldeskb1.png**) for landscape.
- 3) "Pdeskb2" with an 480x854 px dimension and with .png extension (**Pdeskb2.png**) for portrait.
- 4) "Ldeskb2" with an 854x480 px dimension and with .png extension (**Ldeskb2.png**) for landscape.
- 5) "Pdeskb3" with an 480x854 px dimension and with .png extension (**Pdeskb3.png**) for portrait.
- 6) "Ldeskb3" with an 854x480 px dimension and with .png extension (**Ldeskb3.png**) for landscape.

2. Put these images from your PC to: **/home/user/MyDocs/Pictures**

3. Open **N9 QTweak** app (password of **devel-su**, default: **rootme**), choose **w** [hit Enter], then choose **2** [hit Enter].

4. Your setting will take effect after **reboot**. You can choose to restart immediately or not.

- If you use only portrait mode, it is enough to make three pictures (**Pdeskb1.png**, **Pdeskb2.png**, **Pdeskb3.png**) and you will have 3 different screens ...

\* You also have separate option for the long & transparent notification bar, if you don't want to change background.

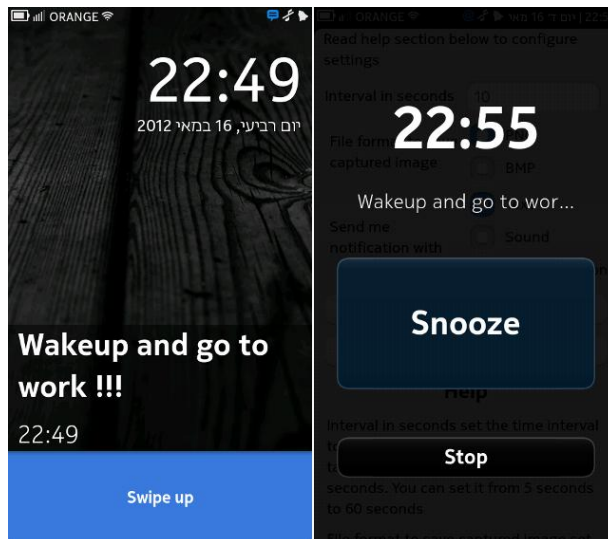

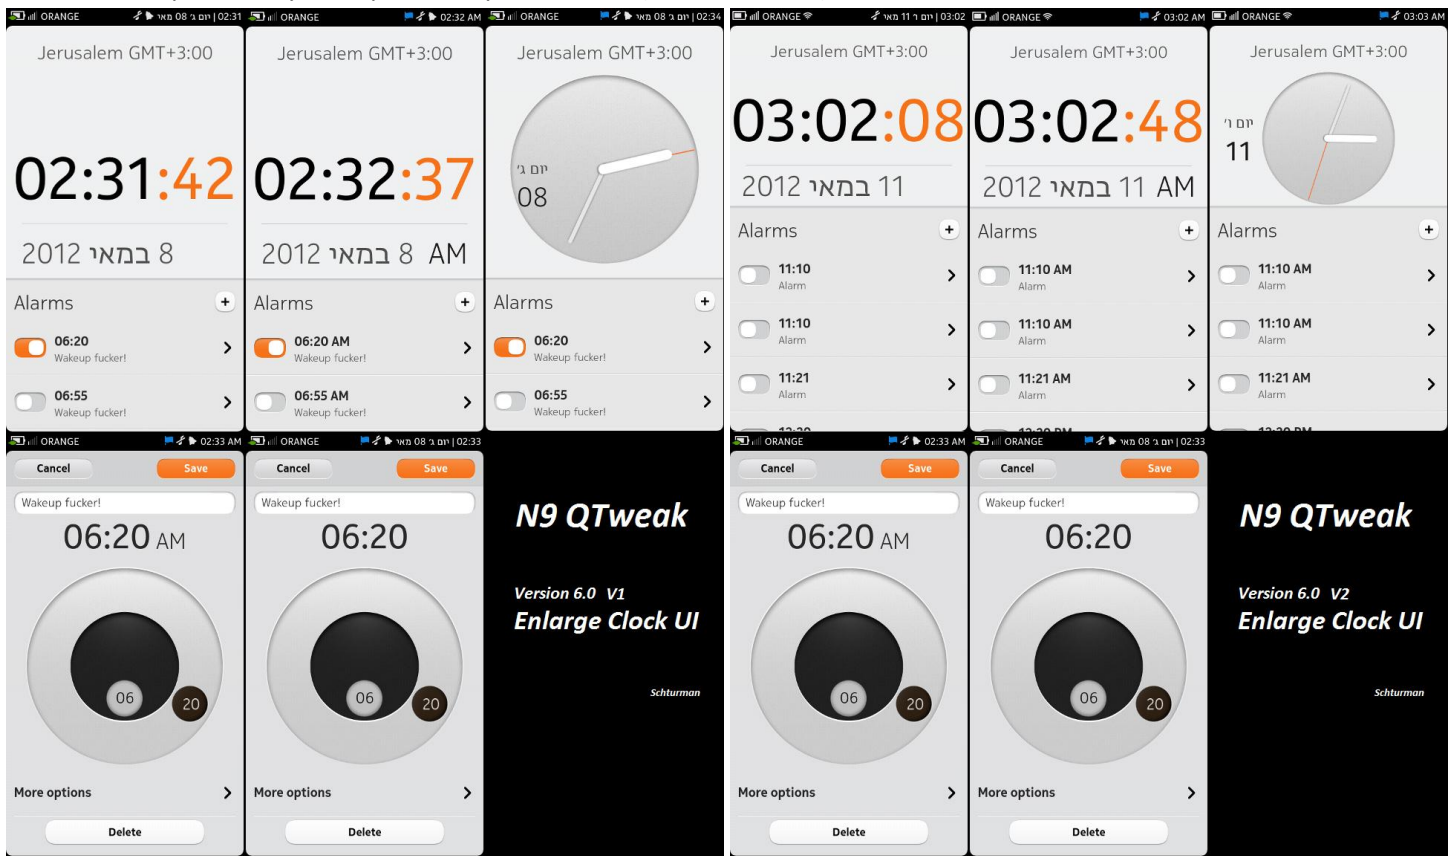

- X. **Enlarge/Restore conversation font size** - Change **Font size** and **TimeStamp** size in your messaging bubbles. This will ask you to insert new size (ex. 30) for the 4 different stuff (outgoing/incoming messages & timestamp). This also have option for **BOLD** or **LIGHT** font...

- Y. **Customize the statusbar clock & Clock UI** – Change your statusbar clock like this ex. **08:08 | Sun 13 Okt** or **08:08 AM | Sun 13 Okt**, or write your **custom** string. See here for [example's](#). This have **auto-refresh**. Also you have 7 version of

enlarging Clock UI (thanks to [Gnome](#) & dvarlamoff) and added option for enlarging Alarm UI. You can choose all of this tweaks separated by one space and press ENTER (ex: 1 2... Enter).

**AA. Uninstall orig. apps (testing stage!) - This tweak ONLY for Pro/Advanced user !!! This Tweak in the testing stage and should to replace Tweak QQ in the future..**

**Before testing this tweak:**

If you used tweak **QQ** – restore all apps back (QQ-4), but if you uninstalled some system apps that not in the list of this tweak QQ, Please restore them before running QQ-4.

Now you can use Tweak **AA** – If for example you want to remove Twitter, you should see this packages for removing:

The following packages will be REMOVED

account-plugin-twitter l10n-app-twitter

l10n-app-tweetershare libmeegotwitter1

twitter twitter-meego twitter-qml

webupload-service-twitter

0 upgraded, 0 newly installed, 8 to remove and 0 not upgraded.

But if you also see **mp-harmattan-001-pr** – **DON'T** uninstall this application !!!

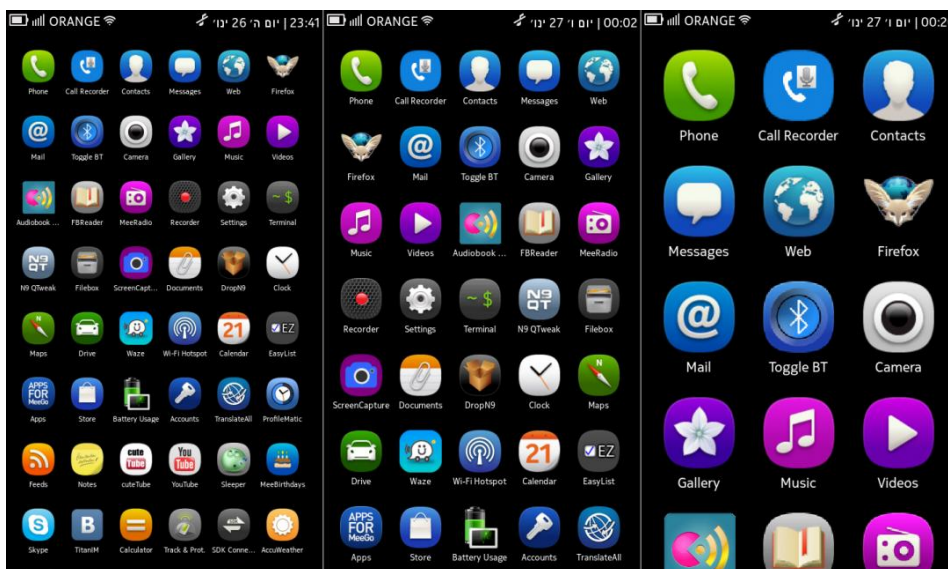

Try to uninstall and reinstall this system applications, also try to install some other regular apps and if you will see message like “**some packages should be removed before installation**” – **DON'T** press ok, only Cancel ! **it can KILL your system.** Please try and report in my thread on TMO (Thanks to CODERUS).

**BB. Enable/Disable automatic brightness** – You can enable or disable automatic brightness (thanks to Almehdin's [script](#)). You also have option for tuning of brightness (from 0 to 225), you can use this after disabling auto-brightness.

**WARNING:** DON'T put this string to "0", this will switch off your screen!!!

**CC. WLAN MODs** – You can Activate/Deactivate Adhoc at startup for USA users (thanks to [itsnotabigtruck](#)). And change WLAN MAC address (thanks to [Camerado](#) & [CODERUS](#)).

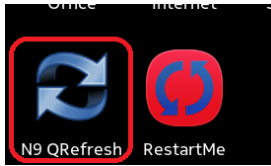

**DD. Resize icon and text on app launcher** – You can change size of the icons on app launcher. And also you can change size & color of the icons text (thanks to Almehdin's [script](#)). **Refresh needed!** You can choose to refresh immediately or not.

**EE. Screen rotation sensitivity** – You can change sensitivity of Accelerometer (thanks to Almehdin's [script](#) and [dvarlamoff](#)).. This have **auto-refresh**.

- For landscape and portrait (1 & 2) = The higher value, you need more rotate the phone to rotate the screen.
- For accelerometer (3) = higher value for more sensitivity, low value for low sensitivity..

**FF. N9 QRefresh button & N9QT splash images** - Press -> type root (devel-su) pass -> get refresh of your phone (statusbar-lockscreen-homescreen).

**Change N9QT splash image** - you can change splash images of N9 QTweak app to some different colors (thanks to 3llipsis for pictures).

**GG. Change Boot video & Startup images** – You can create or download from somewhere the short video named **bootvideo** with **.mp4** extension. Put this video to: **/home/user/MyDocs/Movies/.Bootvideo** and choose option 1 from this tweak. If you also want to change startup images, create 3 images:

1. startup1.png
2. startup2.jpg
3. startup3.jpg

put them to the same folder: **/home/user/MyDocs/Movies/.Bootvideo** and choose option 2 from this tweak. If you want, you can use my [4 videos](#) and startup pic's from F2thaK. (ex. [Video](#))

**HH. Fixing MMS issue on T-Mobile (USA users)** – This should fix MMS issue on T-Mobile for USA users.

**II. Add/Remove extra repos** – You can add 4 new repos:

1. RZR community repository
2. Harmattan SDK repository
3. N9 repository for N950 users
4. Supertux2 repository

**JJ. Change behaviour of PowerKey** – You can change **behaviour** action of Power key for seingle press and double press (thanks to Almehdin's [script](#)).

**KK. Enable Twitter video sharing in Gallery** – This will add options for sharing images via Twitter (thanks to [aegis](#)).

**LL. Lockscreen & live clock icons** – You can add live icon of [clock](#) (thanks to CODERUS and itsnotabigtruck) and also install [lockscreen](#) app.

**MM. ProfileMatic rules backup & restore** – This tweak will backup or restore your rules from [ProfileMatic](#) app. Reboot needed after restore..

**NN. Import your contacts to address book** - This tweak can create one file with all your contacts and import this file to Address book (for example after reflash). You also can use this file with FileBox app. Before using this tweak, you need export all your contacts from address book in to the file, this action will create folder named **"Contacts"** in the **/home/user/MyDocs** directory. This tweak works on the phones with **Russian, English** and **Spanish UI** (thanks to [nikkirov](#), [Craig Mabbitt](#), [HanzBlix](#)).

**OO. Lock your favorite application** - You can lock 4 applications with password (Gallery/Video/Mail/Messages). You have 4 options (**Refresh needed** at the end):

**This lock NOT work if you open your Mail or SMS from the lockscreen or notification screen.**

1. **Lock app** - You can change default password and lock your app.
2. **Unlock app** - Unlock your app one by one or all together.
3. **Remove LockApp and restore to default** - Unlock all your app and remove lock app

**4. Fix problem with duplicated icons** - If for some reasons you will get [duplicated icons](#), this option can fix this problem, but **this action will disorganize all your icons on the homescreen !!!** (thanks to [lktwo](#), [guillermorjaz](#)). You can lock all this applications in one click or by choosing more of one application separated by one space and press ENTER. (ex: 3 5... Enter).

**PP. Launcher progress indicator** – This tweak will add a visual indicator to all your icons. You can see this when you start your applications (thanks to wellef & latency).

**QQ. Uninstall orig. apps (only PRO users) - This tweak ONLY for Pro/Advanced user !!!** Please, use this tweak **ONLY** if you know what you do! This tweak will **UNLOCK** system packages and will give you option to uninstall/install them back. You can see the list of application that you can uninstall or restore them back (big thanks to [CODErUS](#)). You have option for locking your system packages back. When you will run this option, it will **restore** all your removed application and lock system packages.

**BUT, be careful:**

\* Although you will see a message that system packages is locked, you **STILL** can remove system packages - **DON'T do it !!!**, because this action can **KILL** your system !!! After locking, **DON'T** remove system apps !!!

\* If you deleted some apps that NOT in the list of apps in this tweak, you need **restore them before locking !**

\* This option also fixing a lags problem.

**K. Create Backup !!!** – Creating Backup from **your** system files. This will create folder named **“.N9QTweakBackup”** in your: **/home/user/MyDocs**.

**Z. Full Restore** – This will restore **ALL** your tweaks, can **uninstall** new IM's and **restart** or **refresh** your phone. Uninstall have **two** options **Yes & No** and also you will notice twice about **uninstall new IM's**, you can choose **Yes** or **No** inside the restore process.

**V. About & Credits** - it is clear 😊

#### NOTE:

- To uninstall my application, do this by usual way, go to: **Settings -> Applications -> Manage applications**.
- Choose **N9 QTweak** and uninstall it. Another way – long press on **N9 QTweak** icon on the app homescreen.
- Even if you uninstall this app it will **leave** the Backup files in MyDocs (**/home/user/MyDocs/.N9QTweakBackup**) and if for some reason you forgotten to restore your tweaks before uninstalling or just want to restore later, you can do this manually or **only one time** by running the one simple command as ROOT:

**sh /home/user/MyDocs/.N9QTweakBackup/RESTORE**

This command:

1. restore your tweaks to default (except the new IM's)
2. Delete this folder (**.N9QTweakBackup**) from your phone
3. Refresh your home and lockscreens

**How to get clean backup (if you forgot to create):**

**Option 1 (PC + USB cable + N9):**

1. Go to [first post](#) and press on "my clean backup"
2. Download this file to your PC
3. Extract from ZIP
4. Connect your phone to PC with USB cable
5. Press **“Connect via Mass Storage”** on your phone
6. When Win explorer window will opens, transfer the extracted folder **“.N9QTweakBackup”** to your phone
7. Close Win explorer window and disconnect your phone from PC

### **Option 2 (N9 browser + FileBox):**

1. Go to [first post](#) with your N9 browser and press on "my clean backup"
2. When you will see message: "**Couldn't open the file N9QTweakBackup\_6.2\_all.zip because the format is wrong**", press **OK**.
3. When you will see on the black screen "**completed**", press Done.
4. Open **FileBox** app and go to: **/home/user/MyDocs/.downloads**
5. Double click on the file named: **N9QTweakBackup\_6.2\_all.zip**
6. Press on the button "**Extract files**" and this will open for you a new window with: **Arrow up, Extract here, Cancel**.
7. Press **ONCE** on **arrow up**, this will open for you a new window in **/home/user/MyDocs** directory.
8. Press "**Extract here**" and this will open new window with question: "**Override all**", press on this.
9. When process is completed, you can close FileBox app.

### **SOLVING installation problem (some options):**

1. Reboot your phone and try to install again (double click on the **.deb** file).
2. Go to **Settings -> Applications -> Manage applications -> N9 QTweak -> Uninstall**. After this reboot your phone and try to install again (double click on the **.deb** file).
3. Go to **Settings -> Applications -> Manage applications -> N9 QTweak -> Uninstall**. After this go to **/opt** folder with **WinSCP** or **FileBox** as **ROOT** and check if you see folder named "**N9QTweak**". If yes, delete this folder and try to install again (double click on the **.deb** file).
4. Open terminal as **ROOT** and try to install with command: **dpkg -i /path/to/the/file** And write output in [this thread](#)..

### **SOLUTION for MeeCast:**

If you have problem with fullscreen image on the lockscreen (Tweak **C**):

- Go to setting of MeeCast app.
- **Disable** lockscreen widget.
- Now Tweak **C** should work.

### **SOLUTION for Ipsmagic:**

For users who using [Ipsmagic](#) app and have a problem with info screen (solution from [this post](#))..

- Apply you LPS info screen from application itself.
- Apply Tweak **A**, one from 3 option that you want and check you lowpower screen. You will see info screen of LPS cut.
- Go to Tweak **F**, option 2. You can skip all question (just press enter) until the two last:
  1. **Size of oplogo - first number (def. 12):** - here write **45**, then press enter.
  2. **Size of oplogo - second number (def. 12):** - here write **10**, then press enter.
- At the end it will ask you: **Choose F for fix or R for Refresh or Enter for exit:** - just type R, then press enter. This will refresh your lockscreen. Now check your LPS info on the lowpower screen, it should to work...

### **Solution for reboot-loop (ONLY on Linux PC):**

The source here: [http://wiki.meego.com/N950/Fixing\\_MALF\\_state](http://wiki.meego.com/N950/Fixing_MALF_state) (also thanks to [thedead1440](#))

1. Download [N950 MeeGo kernel](#) and [N950 MeeGo rescue initrd](#)
2. Download Flasher for Linux based on your linux architecture: [i386 is for 32-bit systems](#) and [amd64 is for 64-bit systems](#)
3. Go to the **Downloads** directory where your files have been downloaded and double click on the Flasher file to install it (there will be no separate program for flasher it will be integrated into the system instead)
4. **Unplug** the usb cable from your phone
5. Turn your phone **off**
6. Load the N950 MeeGo kernel and N950 MeeGo rescue initrd using flasher:  
Go to the **Downloads** directory again, right-click and select to open terminal here and write this command:

```
sudo flasher --load -k vmlinuz-2.6.32.20112201-11.2-adaptation-n950-bootloader -  
n initrd.img-rescue-2.6.32.20112201-11.2-n950 --boot
```

7. Insert the usb cable
8. Wait about minute until a new USB mass storage device appears on the host

You should now have three partitions: /dev/sdX1 with is MyDocs, /dev/sdX2 which is MeeGo 1.2 Harmattan rootfs, and /dev/sdX3 which is the MeeGo 1.2 Harmattan home directory.

9. Find exact partition's names found on your Nokia N9/N950. Mine had /dev/sdb2 as N9's rootfs.

```
fdisk -l
```

10. Mount **rootfs** somewhere:

```
sudo mkdir /mnt/n9; sudo mount /dev/sdb2 /mnt/n9
```

11. We need to know which file (which tweak) caused the reboot-loop. For example we take that the tweak has modified /usr/share/themes/blanco/meegotouch/meegotouchhome/style/meegotouchhome.css. Open terminal and write:

```
sudo cp -R /path_to_your_backed_up_file /media/{rootfs}/usr/share/themes/blanco/meegotouch/meegotouchhome/style
```

12. Unmount the rootfs:

```
sudo umount /mnt/n9
```

13. Unplug the usb cable and Reboot your phone (reboot-loop should be gone)

Download from my post: <http://talk.maemo.org/showthread.php?t=80600>

This also added to: <http://n9-apps.com> and <http://apps.formeego.org>

If you will download from [apps.formeego.org](http://apps.formeego.org) client, you can see updates in your system.

Enjoy ☺
